

NOVEMBER 2017: We were honored to mingle with such high-caliber interior designers, architects, developers and manufacturers from the hospitality industry at the annual Boutique Design New York (BDNY) earlier this month. If you couldn't make it this year, get a glimpse of the highlights in the video below.

New York has always been an international center for design and BDNY 2017 attracted some of the greatest designers and architects from around the globe. For the second year in a row, we shared an inspired forum with some of the most creative talent this wonderful city has to offer and anticipate great things.

SWAR is an all-inclusive unit which drastically reduces water and soap consumption and can be used with non-proprietary soap for maximum savings. Specifically designed for swift plug and play installation, SWAR saves time, water, energy, soap, space and resources.

The SWAR solution is one part of our pioneering Behind the Mirror range which allows for remote controlled customization of the ideal touch-free soap-water-air cycle. The complete module is available for integration on a stainless steel frame, according to your specific onsite requirements.

Many thanks to those of you who took the time to drop by and meet the team. It was our pleasure to demonstrate our new innovations first hand. Attendee figures this year were the highest ever, exceeding our expectations. In short, BDNY was, once again, an all-round success.
